

Project Documentation

Project Title:

HR Analytics Dashboard

Prepared By:

Bismah Kiran

Project Type:

Internship Project

ID:

ZYNVEX-CERT-0292

Submission Date:

18th August 2026

1. Project Title:

HR Analytics Dashboard

2. Project Objective:

The main objective of this project was to develop an interactive **HR Analytics Dashboard** using **Microsoft Excel** for analyzing and presenting employee-related information in a clear and organized manner.

The dashboard was designed to provide an overview of the workforce and help analyze important HR metrics such as employee demographics, employment status, departments, regions, age ranges, skills, work locations, salaries, leave tracking, and performance ratings.

The project also aimed to demonstrate the practical use of Excel's **formulas, PivotTables, slicers, filters, and charts**.

3. Background:

Human Resource departments manage a wide range of employee information, including personal details, job roles, departments, salaries, performance ratings, skills, work locations, and employment status. When this information is maintained only in raw tabular form, it can be difficult to analyze and interpret efficiently.

An HR Analytics Dashboard provides a centralized and visual way to understand workforce information. Instead of manually reviewing individual employee records, HR users can use summarized information and interactive filters to quickly analyze different employee groups.

For this project, an Excel-based HR Analytics Dashboard was developed using a dataset of 50 employees. The dashboard presents important workforce information through different analytical sections and visualizations.

4. Problem Statement:

Managing and analyzing employee information from a large table can be time-consuming and may make it difficult to identify important workforce patterns.

The problem addressed by this project was to develop a simple and interactive Excel-based solution that could:

- Organize employee information systematically.
- Summarize employee data into meaningful categories.

- Provide quick insights into workforce characteristics.
- Present HR information through visual charts.
- Allow users to filter employee information interactively.
- Make HR data easier to understand and analyze.
- Provide a centralized dashboard for important HR metrics.

The project therefore focuses on transforming raw employee information into a structured and interactive HR reporting dashboard.

5. Project Structure:

The project consists of **one Excel workbook containing three worksheets.**

Sheet 1 – Dashboard:

The Dashboard is the main output of the project. It presents the summarized employee information using KPI sections, charts, and interactive filters.

The dashboard contains the following major sections:

Employees Number:

Displays the total number of employees in the dataset.

Total Employees: 50

Gender Distribution:

Shows the distribution of male and female employees.

- Male Employees: 25
- Female Employees: 25
- Male Percentage: 50%
- Female Percentage: 50%

Performance Rating:

Displays the average employee performance rating.

Skills Breakdown:

Shows the number of employees possessing specific skills, including skills such as:

- Communication
- Design
- Excel

- Management
- Python

Work Location:

Shows the distribution of employees according to their workplace:

- Branch Office
- Head Office
- Remote

Age Range:

Displays the distribution of employees according to different age groups, such as:

- 18–25
- 26–35
- 36–45
- 46–55
- 56+

Leave Tracking:

Provides a visual comparison of leave-related information across relevant job roles.

Regions:

Displays the number of employees belonging to different regions, including:

- Sindh
- AJK
- KPK
- Punjab
- Balochistan

Salaries:

Provides a summary of salary information according to different job roles.

Employment Status Breakdown:

Displays employees according to their employment status:

- Full-time
- Part-time
- Contract

Gender Filter:

Allows the user to filter the dashboard according to gender.

Department Filter:

Allows the user to filter the dashboard according to department, such as:

- Finance
- HR
- IT
- Marketing
- Operations

Sheet 2 – Employee Data:

The second worksheet contains the original employee dataset consisting of **50 employee records**.

The main columns included in the dataset are:

- Employee ID
- Full Name
- Gender
- Age
- Age Range
- Region
- Job Title
- Department
- Date of Hiring
- Performance Rating
- Training Programs Attended
- Skills
- Certifications
- Work Location

The Employee Data sheet acts as the main source of information for the analysis and dashboard.

Sheet 3 – Pivot Tables:

The third worksheet contains **seven PivotTables** created to summarize different aspects of the employee dataset.

Employment Status PivotTable:

This PivotTable summarizes the number of employees according to their employment status:

- Full-time
- Part-time
- Contract

Salary Analysis PivotTable:

This PivotTable summarizes salary information according to different job roles, allowing salary differences between roles to be analyzed.

Age Range PivotTable:

This PivotTable groups employees according to their age ranges and shows how many employees belong to each age category.

Work Location PivotTable:

This PivotTable summarizes the number of employees working at:

- Branch Office
- Head Office
- Remote

Skills PivotTable:

This PivotTable identifies specific employee skills and shows how many employees possess each skill.

Region PivotTable:

This PivotTable summarizes the number of employees in each region, including:

- Sindh
- AJK
- KPK
- Punjab
- Balochistan

Department PivotTable:

This PivotTable shows the distribution of employees among departments such as:

- Finance

- HR
- IT
- Marketing
- Operations

These PivotTables provide the summarized information required for the dashboard analysis.

6. Role and Responsibilities:

My major responsibilities in this project included:

- Preparing and organizing the employee dataset.
- Structuring the employee information in Excel.
- Creating seven PivotTables for HR analysis.
- Applying Excel formulas for required calculations.
- Creating filters for employee data.
- Creating slicers for interactive dashboard filtering.
- Creating standard Excel charts for data visualization.
- Designing the overall dashboard layout.
- Organizing different HR metrics into separate dashboard sections.
- Checking calculations and ensuring consistency between the dataset, PivotTables, and dashboard.
- Developing the final interactive HR Analytics Dashboard.

7. Tools and Technologies Used:

Tool:

- Microsoft Excel

Excel Features Used:

- Excel Formulas
- PivotTables
- Filters
- Slicers
- Pie Charts
- Column Charts
- Bar Charts
- Basic Excel formatting
- Worksheet Organization

Techniques Used:

- Data Organization
- Data Filtering
- Data Summarization
- Data Aggregation
- Data Visualization
- Dashboard Design
- Interactive Data Analysis

8. Work Completed During the Internship:

During the project, an Excel-based HR Analytics Dashboard was developed from a dataset of 50 employees.

The major work completed included:

- Preparing the employee dataset.
- Organizing employee information into a structured Excel table.
- Creating seven PivotTables for HR analysis.
- Using formulas for calculations and dashboard metrics.
- Creating standard Excel charts for visual analysis.
- Implementing slicers for interactive filtering.
- Creating dashboard sections for different HR metrics.
- Adding gender and department filtering functionality.
- Organizing the dashboard into a professional and readable layout.
- Reviewing the dashboard to ensure that the displayed information corresponded with the underlying data.

9. Implementation Details:

The final dashboard was implemented by combining the employee dataset, PivotTables, formulas, charts, filters, and slicers.

Employee Overview:

The dashboard displays the total number of employees as 50.

Gender Analysis:

The dataset contains 25 male and 25 female employees, resulting in an equal gender distribution:

- Male: 50%
- Female: 50%

Performance Analysis:

An average performance rating is displayed as a KPI to provide an overall indication of employee performance.

Skills Analysis:

The Skills Breakdown section uses summarized employee information to show how many employees possess particular skills.

Work Location Analysis:

Employees are categorized into Branch Office, Head Office, and Remote work locations. A visual chart makes the distribution easier to compare.

Age Analysis:

Employees are grouped into different age ranges to show the age composition of the workforce.

Regional Analysis:

The Regions section displays employee distribution across five regions:

- Sindh
- AJK
- KPK
- Punjab
- Balochistan

Salary Analysis:

Salary information is summarized by job role to provide an overview of salary distribution within the workforce.

Employment Status Analysis:

Employees are categorized as Full-time, Part-time, or Contract employees.

Leave Tracking:

The dashboard includes a leave tracking visualization that compares leave-related information across relevant job roles.

Interactive Filtering:

Slicers were added to allow users to select specific genders or departments. When a selection is made, the dashboard can be filtered to analyze the relevant employee group.

10. Methodology:

The project followed a structured data analysis and dashboard development process.

Step 1: Employee Data Preparation:

A dataset containing 50 employee records was prepared and organized in Excel.

Step 2: Data Structuring:

Employee information was arranged into appropriate columns, including demographic, professional, performance, skill, and workplace information.

Step 3: Data Summarization:

PivotTables were created to summarize the employee information according to employment status, salary, age range, work location, skills, region, and department.

Step 4: Formula-Based Calculations:

Excel formulas were used to calculate and display required values and metrics.

Step 5: Data Visualization:

The summarized information was represented through standard Excel charts, including:

- Doughnut/Pie Charts
- Column Charts
- Bar Charts

Step 6: Interactive Filtering:

Slicers were implemented to allow users to filter the dashboard by relevant categories such as gender and department.

Step 7: Dashboard Development:

Finally, the summarized information, calculated values, charts, and filters were arranged into a single HR Analytics Dashboard.

11. Results and Outcomes:

The project successfully resulted in the development of an **interactive HR Analytics Dashboard using Microsoft Excel**.

The final outcome includes:

- One Excel workbook.
- Three worksheets.
- A structured dataset containing 50 employees.
- Seven PivotTables.
- Multiple Excel formulas.
- Standard charts for data visualization.
- Interactive slicers.
- Dashboard filters.
- A centralized HR reporting dashboard.

The dashboard allows users to view and analyze workforce information in a more organized and visual format.

The interactive filtering functionality also allows users to focus on specific employee groups, such as employees belonging to a particular gender or department.

Overall, the project transformed raw employee information into a visual and interactive HR analysis solution.

12. Challenges faced and how they were solved:

Challenge 1: Organizing Multiple Employee Attributes:

The dataset contained many different types of employee information, including demographics, job information, skills, performance, and workplace details.

Solution:

The information was organized into clearly defined columns so that it could be easily analyzed using Excel's PivotTables and formulas.

Challenge 2: Summarizing Raw Employee Data:

Reviewing individual employee records did not provide an immediate overview of the workforce.

Solution:

Seven PivotTables were created to summarize the data according to employment status, salary, age range, work location, skills, region, and department.

Challenge 3: Making the Dashboard Interactive:

A static dashboard would not allow users to easily analyze different employee groups.

Solution:

Slicers and filters were implemented so users could select categories such as gender and department.

13. Screenshot / Example of Work:

13.1 HR Analytics Dashboard:

This screenshot shows the final HR Analytics Dashboard developed in Microsoft Excel. It presents key employee information through charts, summary values, filters, and slicers. The dashboard includes analysis of employee count, gender distribution, performance rating, skills, work location, age range, leave tracking, regions, salaries, and employment status. Slicers for gender and department allow users to interactively filter the dashboard and analyze specific employee groups.

13.2 Employee Data Sheet:

Age	Age Range	Region	Job Title	Department	Date of Hiring	Performance Rating	Training Programs Attended	Skills	Certifications	Work Location
25	20-29	North	Manager	Finance	2015/01/15	4.5	Project Management	Advanced Excel	CPA	Head Office

500	495-504	North	Manager	Finance	2092/03/22	11.9	Project Management	Advanced Excel	CPA	Head Office

This screenshot shows the Employee Data worksheet containing records of 50 employees. The dataset includes employee-related information such as Employee ID, Full Name, Gender, Age, Age Range, Region, Job Title, Department, Date of Hiring, Performance Rating, Training Programs Attended, Skills, Certifications, and Work Location. This worksheet serves as the main source dataset for the PivotTables and dashboard analysis.

13.3 Pivot Tables Sheet:

This screenshot shows the Pivot Tables worksheet containing seven PivotTables created for employee data analysis. The PivotTables summarize information related to employment status, salaries, age range, work location, skills, regions, and departments. These summarized tables were used as the basis for analyzing the employee data and developing the visualizations presented in the HR Analytics Dashboard.

Department	Job Title	Performance Rating	Count	Sum	Average
Engineering	Software Engineer	High	10	100000	10000
Engineering	Software Engineer	Medium	20	200000	10000
Engineering	Software Engineer	Low	10	100000	10000
Marketing	Marketing Specialist	High	5	50000	10000
Marketing	Marketing Specialist	Medium	10	100000	10000
Marketing	Marketing Specialist	Low	5	50000	10000
Sales	Sales Representative	High	15	150000	10000
Sales	Sales Representative	Medium	20	200000	10000
Sales	Sales Representative	Low	10	100000	10000
HR	HR Specialist	High	5	50000	10000
HR	HR Specialist	Medium	10	100000	10000
HR	HR Specialist	Low	5	50000	10000
Finance	Finance Analyst	High	10	100000	10000
Finance	Finance Analyst	Medium	15	150000	10000
Finance	Finance Analyst	Low	10	100000	10000
Operations	Operations Manager	High	5	50000	10000
Operations	Operations Manager	Medium	10	100000	10000
Operations	Operations Manager	Low	5	50000	10000

14. Skills and Knowledge Gained:

Through this project, I gained practical experience in Excel-based data analysis and dashboard development.

The major skills developed include:

- Microsoft Excel
- Data Organization
- Data Analysis

The project also helped me understand how raw employee data can be transformed into meaningful information that can support HR analysis and decision-making.

15. Conclusion:

The HR Analytics Dashboard project successfully demonstrated how Microsoft Excel can be used to organize, analyze, visualize, and present employee information through an interactive dashboard.

The project consisted of one Excel workbook containing three worksheets: an Employee Data sheet, a Pivot Tables sheet, and the final Dashboard sheet. A dataset of 50 employees, consisting of 25 male and 25 female employees, was analyzed using Excel formulas, seven PivotTables, filters, slicers, and standard charts.

The final dashboard provides a centralized view of important HR information, including employee demographics, skills, work locations, age ranges, salaries, regions, departments, employment status, leave tracking, and performance rating.

16. Recommendations and Future Improvements:

Although the dashboard provides an effective overview of the employee dataset, several improvements could be made in future versions.

Add More Interactive Filters:

Additional slicers could be added for:

- Region
- Job Title
- Work Location
- Age Range
- Employment Status

This would allow more detailed analysis.

Add Performance Analysis:

Performance ratings could be analyzed by department, job title, gender, or region to identify performance patterns.

Automate Dashboard Updates:

The workbook could be improved so that when new employee records are added, the PivotTables and dashboard can be refreshed automatically.

Improve Visual Interactivity:

More interactive dashboard controls and dynamic visualizations could be added to make the dashboard easier to explore.
